## FM Unique frequency hand set tuning

First make sure rollers are disconnected from tyres.

Locate the ECB, which is usually fitted beneath one of the centre seats.

Turn on the ECB by using the isolation switch the green LED will illuminate, at the top left hand side of the ECB you will see a small hole, using a needle push the reset button, the red and green LED's will now flash. Now switch on your handset and your unit is configured.

NOTE: Small needle type plastic rods are located at the lid where the cables enter the ECB, these can be disconnected and used as a reset tool. If disconnected from the main enclosure, place in the front of the enclosure after use for next time.
